

AARRR Funnel Identification – Twitter / X

FUNNEL ANALYSIS FOR TWITTER/X

step-by-step journey users take from discovering a product to becoming customers. It is called a funnel because the number of users decreases at each stage, just like a real funnel

1.Awareness

People first hear about Twitter.

Examples:

- Seeing tweets shared on other platforms
- News articles quoting tweets
- Friends talking about it

Example numbers:

100,000 people hear about Twitter.

2.Interest

Some people **visit the app or website** to check it out.

Examples:

- Visiting the website
- Downloading the app from the App Store or Play Store

Example numbers:

40,000 people visit or install the app.

3. Signup / Activation

Users **create an account and start using it.**

Examples:

- Sign up with email or phone
- Follow some accounts
- See their first feed

Example numbers:

20,000 people create accounts.

4. Engagement / Retention

Users **keep coming back and using the app regularly.**

Examples:

- Posting tweets
- Liking and retweeting
- Reading tweets daily

Example numbers:

8,000 users stay active.

5.Revenue

Twitter earns money from these users.

Examples:

- Ads shown in the feed
- Premium subscription like **X Premium**

Example numbers:

1,000 users subscribe or generate ad revenue.

Simple Funnel Visualization

Awareness → 100,000 people hear about Twitter

Interest → 40,000 visit/download

Signup → 20,000 create account

Retention → 8,000 active users

Revenue → 1,000 paying users

how the **AARRR framework** applies to **Twitter / X** in simple terms:

1 Acquisition – How users discover and sign up

Users first **find the platform** and create an account.

Examples:

- Seeing tweets embedded in news articles
 - Friends sharing tweets on other social media
 - Downloading the app from the Play Store/App Store
 - Signing up using email, phone number, or Google/Apple account
-

2 Activation – First value experience

This is when users **experience the main value of the product** for the first time.

On Twitter/X this happens when:

- The user **follows some accounts** during onboarding
- They see an **interesting feed of tweets**
- They like or reply to their **first tweet**

This moment makes them feel **“This app is interesting.”**

3 Retention – What brings users back

Retention means **users continue using the app regularly**.

Twitter/X keeps users returning through:

- Real-time news and trending topics
 - Notifications (likes, replies, follows)
 - Engaging tweets and discussions
 - Personalized feed recommendations
-

4 Revenue – Where monetization happens

Twitter/X earns money from:

- **Advertisements** shown in the feed
- Paid subscription like **X Premium**

- Creator monetization tools (subscriptions, tips)
-

5 Referral – How users invite or influence others

Existing users **bring new users to the platform**.

Examples:

- Sharing tweet links with friends
- Viral tweets spreading across other platforms
- Influencers encouraging followers to join Twitter/X

AARRR funnel gap analysis for Twitter / X.

Gap analysis and growth opportunities

A **gap** is something **missing in the product experience** that users need.

Key Gaps Identified in AARRR Funnel

1 Limited Personalization (Dark Mode Preference)

Gap:

Some users prefer **dark mode interfaces** for comfort, especially during night usage.

Friction:

If users cannot easily switch or customize their viewing mode, it may affect their overall experience.

Why it matters for growth:

UI comfort improves **retention**, because users spend longer time on the app.

2 Difficulty Managing Sensitive Media Content

Gap:

Users may encounter **sensitive or explicit media** in their feed.

Friction:

If controls to hide or filter such content are not easily accessible, users may feel uncomfortable.

Why it matters for growth:

This can affect **retention**, as some users may reduce usage due to unwanted content.

3 Lack of Strong Content Moderation (Harmful Content Removal)

Gap:

Some users report the presence of **harmful, spam, or misleading content**.

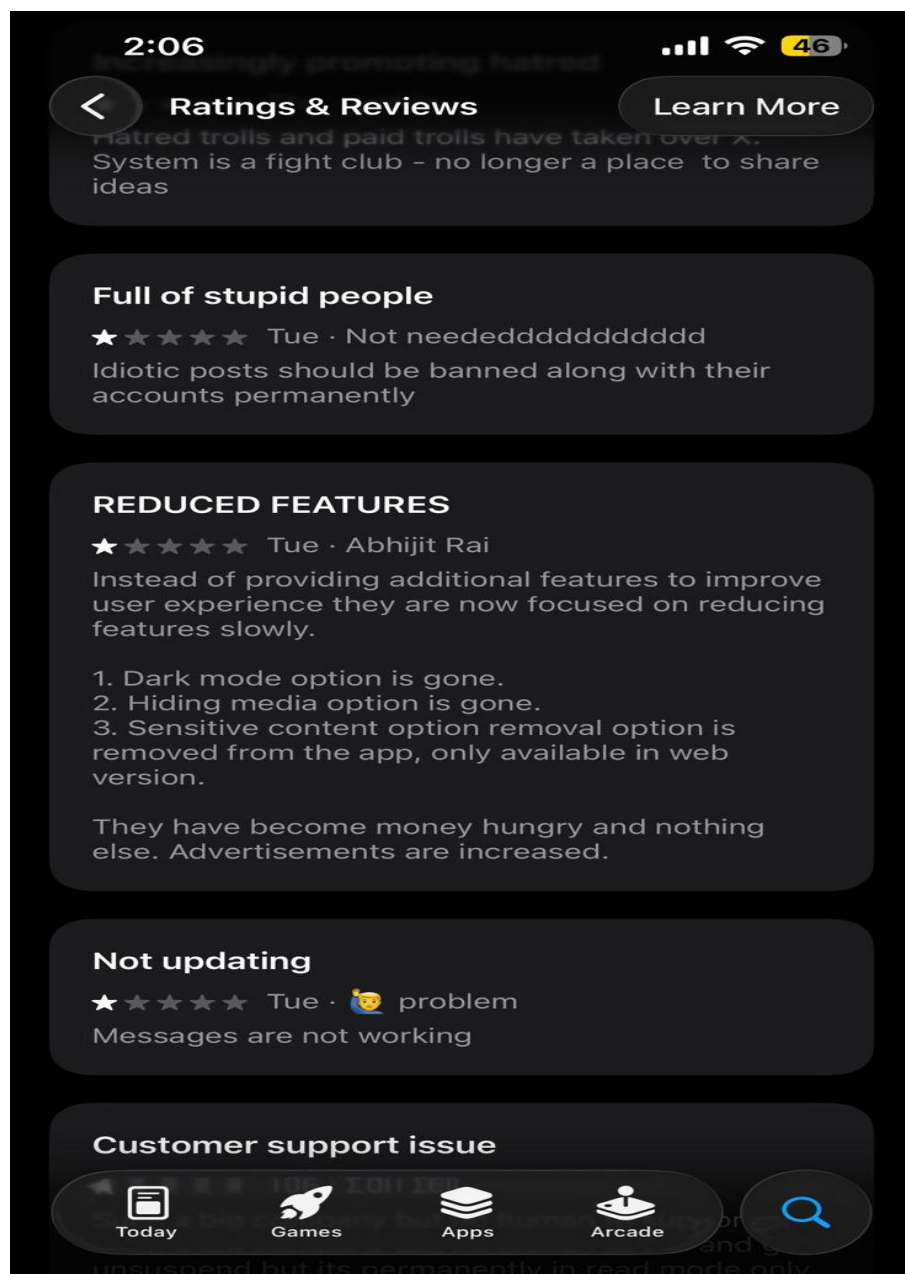

Missed Opportunity:

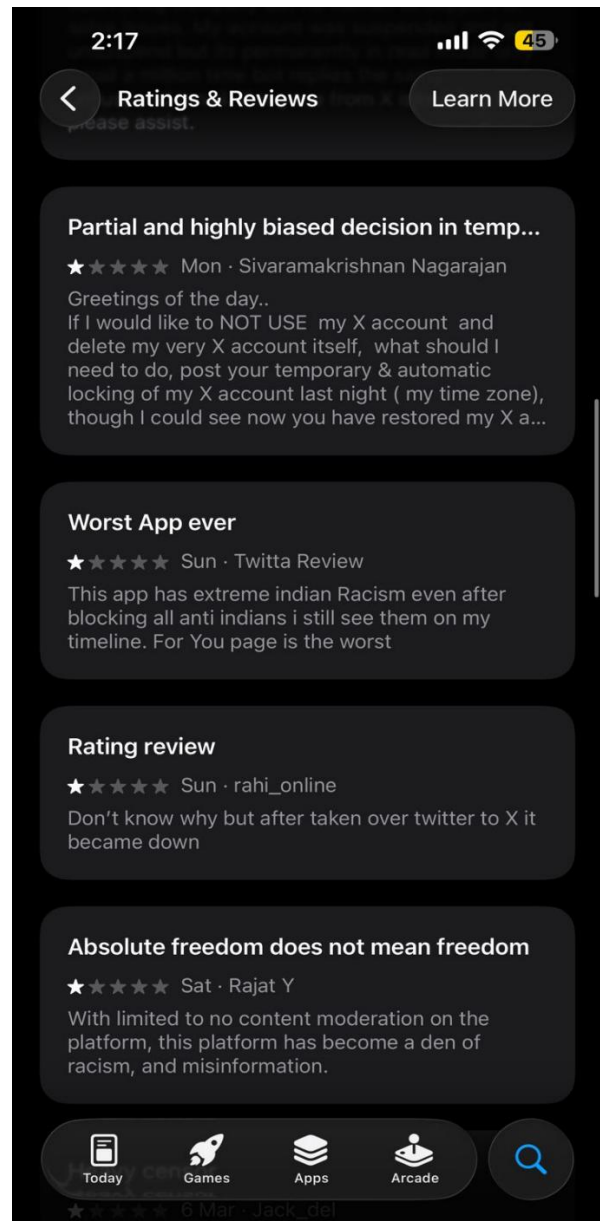

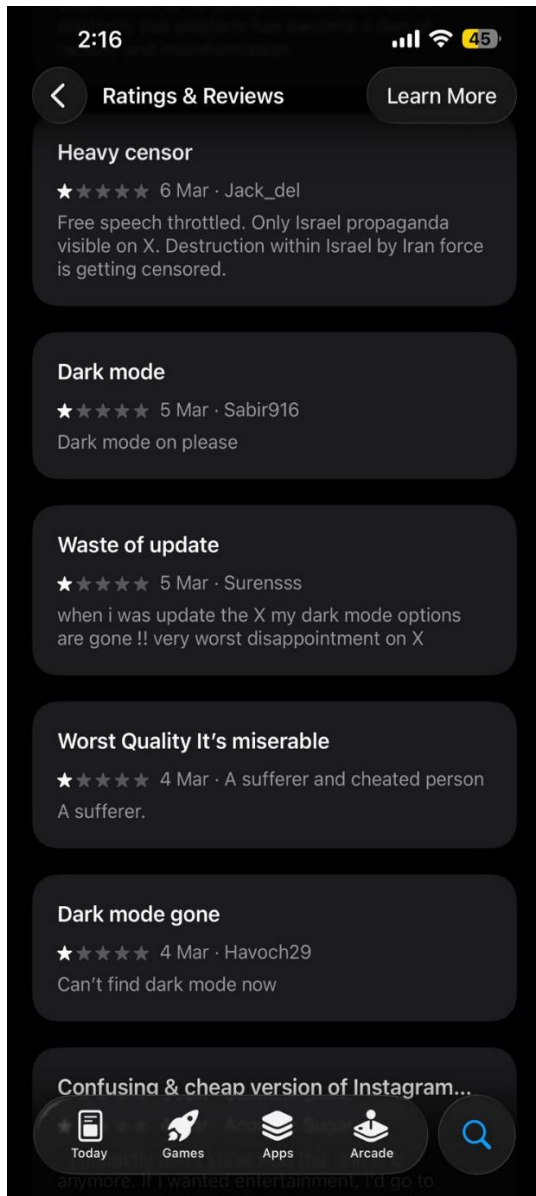

Stronger moderation tools could create a **safer and more trustworthy environment**.

Why it matters for growth:

Better moderation increases **user trust and long-term retention**.

Source:

Several App Store reviews mention that users encounter unwanted sensitive content in their feed, which negatively impacts their experience

AARRR Stage	Gap / Bottleneck	Behavioral Assumption	Why It Matters for Growth
Activation	Users may not easily discover personalization features like dark mode or settings	Users prefer comfortable and customizable interfaces when using apps for long periods	Poor first experience may reduce engagement and activation
Retention	Sensitive media appearing in the feed	Users expect safe and controllable content experiences	Exposure to unwanted content can reduce app usage and retention
Retention	Weak content moderation or harmful content	Users trust platforms that maintain healthy conversations	Poor moderation can decrease user trust and long-term engagement
Referral	Tweets shared as screenshots instead of links	Users prefer quick and convenient sharing methods	Screenshots reduce the chance of new users visiting the platform

Proposed Epics to Drive Growth

Insight / Gap	AARRR Stage	Proposed Epic	How It Improves User Experience	Growth Impact
Users may encounter sensitive or unwanted media in their feed	Retention	Advanced Content Control System	Allow users to easily filter or hide sensitive media and customize feed safety settings	Improves user comfort and increases long-term engagement
Weak content moderation or harmful content	Retention	AI-Powered Content Moderation	Use AI to detect spam, harmful posts, and misleading content faster	Builds user trust and encourages consistent platform usage
Tweets often shared as screenshots instead of links	Referral	Smart Sharing Features	Introduce easier share options and incentives to share tweet links across platforms	Increases organic growth and attracts new users

Insight / Gap	AARRR Stage	Proposed Epic	How It Improves User Experience	Growth Impact
Users unaware of personalization settings like dark mode	Activation	Improved Onboarding & Personalization Setup	During onboarding, show users customization options and feed preferences	Helps users experience value faster and improves activation

Improved Onboarding & Personalization

Welcome to X

☐ Reduce political content

☐ Reduce spam accounts

☒ Show only followed accounts

Safety Tools

The above wireframes illustrate the proposed product features supporting the growth epics for X (formerly Twitter). The first wireframe demonstrates an improved onboarding and personalization experience that helps new users quickly select interests and customize settings such as dark mode, improving the Activation stage of the AARRR funnel. The second wireframe presents advanced content control settings that allow users to filter sensitive media and manage feed preferences, improving Retention by creating a safer and more comfortable user experience. These features support the proposed epics aimed at driving user engagement and long-term growth.

.

Epic	Reach	Impact	Confidence	Effort	RICE Score
Improved Onboarding & Personalization Setup	9	2.5	0.8	3	6.0
Advanced Content Control System	8	2	0.75	3	4.0
Smart Sharing Features	7	1.5	0.7	3	2.45
AI-Powered Content Moderation	7	2	0.6	5	1.68

RICE Score = (Reach × Impact × Confidence) ÷ Effort

The **Improved Onboarding & Personalization Setup** epic receives the highest RICE score because it impacts a large number of new users and directly improves the **Activation stage** of the funnel. Helping users quickly customize their experience and follow relevant accounts increases the chances that they experience the platform's value early.

The **Advanced Content Control System** is the next priority as it improves **Retention** by allowing users to manage sensitive or unwanted content, creating a safer browsing experience.

While **Smart Sharing Features** and **AI-Powered Content Moderation** are important for long-term growth, they either have slightly lower impact or require more development effort, making them lower priority in the short term.
